

RENEWABLE ENERGY PROGRAM AT IEU

2022

- *Solar Energy Awareness Campaign:* Launch an educational campaign to inform students and staff about the benefits of solar energy and the photovoltaic systems installed on campus. This can include workshops, seminars, and information sessions.
- *Solar Energy Monitoring System:* Implement a system that allows real-time monitoring of energy generation from the solar panels. This data can be made available to the university community through a website or app, creating transparency and encouraging energy conservation.
- *Solar Power Scholarships:* Create scholarships or incentives for students or researchers who work on projects related to renewable energy, with a focus on solar energy, to encourage innovation and research in this field.
- *Green Campus Initiative:* Organize campus-wide events and activities that promote sustainability, such as tree planting, waste reduction campaigns, and eco-friendly practices. This can foster a culture of environmental responsibility among students and staff.
- *Collaboration with Local Energy Suppliers:* Partner with local energy companies to purchase excess energy generated by the solar panels, which can generate revenue for the university and further support its sustainability efforts.
